BASIC LINUX COMMANDS

Date: 22.01.2025

Ex No: 1b

1.1 GENERAL PURPOSE COMMANDS

1. The date command

Description: Displays the current date and time.

Syntax:

\$ date

Input:

\$ date

Output:

Sat Apr 12 10:23:45 IST 2025

Other Formats:

Format	Purpose	Input	Output
+%m	Display month (numeric)	\$ date +%m	04
+%h	Display month (name)	\$ date +%h	Apr
+%d	Display day of the month	\$ date +%d	12
+%y	Last two digits of year	\$ date +%y	25
+%H	Display hour	\$ date +%H	10
+%M	Display minutes	\$ date +%M	23
+%S	Display seconds	\$ date +%S	45

2. The echo command

Description: Prints a message to the terminal.

Syntax:

\$ echo "your message"

Input:

\$ echo "God is Great"

Output:

God is Great

3. The cal command

Syntax:

 $\textbf{Description:} \ \mathsf{Displays} \ \mathsf{calendar} \ \mathsf{of} \ \mathsf{specified} \ \mathsf{month/year}.$

cal [month] [year]				
nput:				
cal Jan 2012				
Output:				
January 2012				
u Mo Tu We Th Fr Sa				
1 2 3 4 5 6 7				
8 9 10 11 12 13 14				
15 16 17 18 19 20 21				
2 23 24 25 26 27 28				
9 30 31				
. The bc command				
Pescription: Launches a basic calculator. yntax:				
bc				
nput:				
bc -l				
6/4				
/2				
Output:				
. The who command				
Description: Shows users currently logged in. yntax:				
who				
nput:				

\$ who
Output:
arsath tty1 2025-04-12 09:00
6. The who am i command
Description: Shows info about current session user. Syntax:
\$ who am i
Input:
\$ who am i
Output:
arsath pts/0 2025-04-12 09:10
7. The id command
Description: Displays UID, GID, and groups of user. Syntax:
\$ id
Input:
\$ id
Output:
uid=1000(arsath) gid=1000(arsath) groups=1000(arsath),10(wheel)
8. The tty command
Description: Displays terminal name. Syntax:
\$ tty
Input:
\$ tty
Output:
/dev/pts/0

9. The clear command

Description: Clears the terminal screen. Syntax:				
\$ clear				
Input:				
\$ clear				
Output: (Terminal screen gets cleared)				
10. The man command				
Description: Shows manual page for commands. Syntax:				
\$ man [command]				
Input:				
\$ man date				
Output: (Manual page opens for the date command. Press q to quit.)				
11. The ps command				
Description: Shows running processes. Syntax:				
\$ ps				
Input:				
\$ ps				
Output:				
PID TTY TIME CMD				
1234 pts/0 00:00:00 bash				
1278 pts/0 00:00:00 ps				
12. The uname command				
Description: Shows system details. Syntax:				
\$ uname [option]				
Input:				

\$ uname -a
Output:
Linux fedora 6.5.9-300.fc39.x86_64 #1 SMP x86_64 GNU/Linux
1.2 DIRECTORY COMMANDS
1. The pwd command
Description: Displays current directory path. Syntax:
\$ pwd
Input:
\$ pwd
Output:
/home/arsath
2. The mkdir command
Description: Creates a new directory. Syntax:
\$ mkdir dirname
Input:
\$ mkdir receee
Output: (A directory named receee is created)
3. The rmdir command
Description: Deletes an empty directory. Syntax:
\$ rmdir dirname
Input:
\$ rmdir receee

4. The cd command

(The receee directory is removed if empty)

Output:

Description: Changes the current directory. Syntax:
\$ cd dirname
Input:
\$ cd receee
Output: (You are now inside the receee directory)
5. The ls command
Description: Lists contents of the directory. Syntax:
\$ ls
Input:
\$ Is
Output:
file1.txt file2.sh receee
Input (long listing):
\$ Is -I
Output:
-rw-rw-r 1 arsath arsath 0 Apr 12 10:24 file1.txt
Input (including hidden files):
\$ Is -a
Output:
bashrc file1.txt receee
1.3 FILE HANDLING COMMANDS
1. The 'cat' command

Purpose: Used to create a file.

SYNTAX:

EXAMPLE:

\$ cat > filename

\$ cat > rec
Arun
Arsath
^D # (Press Ctrl + D to save and exit)
2. Display contents of a file
SYNTAX:
\$ cat filename
EXAMPLE:
\$ cat rec
Output:
Arun
Arsath
3. The 'cp' command
Purpose : Copy contents from one file to another. SYNTAX :
\$ cp oldfile newfile
EXAMPLE:
\$ cp rec cse
\$ cat cse
Output:
Arun
Arsath
4. The 'rm' command
Purpose: Delete a file. SYNTAX:
\$ rm filename
EXAMPLES:
\$ rm rec
\$ rm -f rec
\$ rm -fr directory name # Deletes folder recursively

5. The 'mv' command

Purpose: Move or rename a file. SYNTAX:		
\$ mv oldfile newfile		
EXAMPLE:		
\$ mv cse eee		
\$ ls		
Output: eee		
6. The 'file' command		
Purpose: Determine file type. SYNTAX:		
\$ file filename		
EXAMPLE:		
\$ file eee		
Output: eee: ASCII text		
7. The 'wc' command		
Purpose : Word, line, and character count. SYNTAX :		
\$ wc filename		
EXAMPLE:		
\$ wc eee		
Output: 2 2 12 eee		
8. Directing output to a file		
Purpose : Save command output to a file. SYNTAX :		
\$ ls > filename		
EXAMPLE:		
\$ ls > list.txt		
\$ cat list.txt		
Output:		
eee		
list.txt		
9. Pipes		

Purpose: Use output of one command as input to another.

SYNTAX:

\$ command1 | command2

EXAMPLE:

\$ who | wc -l

Output: 3 # (Displays number of logged-in users)

10. The 'tee' command

Purpose: Save output in middle of a pipe.

SYNTAX:

\$ command | tee filename

EXAMPLE:

\$ who | tee sample | wc -l

Output: 3

\$ cat sample

Output: list of logged-in users

11. Metacharacters in Unix

Purpose: Pattern matching with special characters.

Symbol Meaning

- * Matches any number of characters
- ? Matches a single character
- [] Matches any character in the set
- [!] Negates the set

EXAMPLES:

\$ Is r* # Files starting with r

\$ Is ?kkk # Files like "rkkk", "skkk"

\$ Is [a-m]* # Files starting with a-m

\$ Is [!a-m]* # Files NOT starting with a-m

13. File Permissions

Each file has:

• Owner

- Group
- Others

Each with:

- r (read) = 4
- w (write) = 2
- x (execute) = 1

EXAMPLE:

\$ Is -I college

-rwxr-xr-- 1 Lak std 1525 Jan 10 12:10 college

- rwx: Owner has read, write, execute
- r-x: Group has read and execute
- r--: Others have only read

13. The 'chmod' command

SYNTAX:

\$ chmod category operation permission filename

EXAMPLES:

\$ chmod u-wx college

(Remove write & execute for user)

\$ chmod u+rw, g+rw college

(Add read & write to user & group)

\$ chmod g=wx college

(Set write & execute to group only)

14. Octal Notation

SYNTAX:

\$ chmod 761 college

Explanation:

• 7 (owner) = rwx

- 6 (group) = rw-
- 1 (others) = --x

1.4 GROUPING COMMANDS

1. Semicolon (;)

Executes multiple commands sequentially.

EXAMPLE:

\$ who; date

Output:

(list of users)

Sat Apr 12 10:45:00 IST 2025

2. Logical AND (&&)

Executes next only if previous is successful.

EXAMPLE:

\$ Is && date

Output:

(file list)

Sat Apr 12 10:45:00 IST 2025

3. Logical OR (||)

Executes next only if previous fails.

EXAMPLE:

\$ Is nofile || date

Output:

ls: cannot access 'nofile': No such file or directory

Sat Apr 12 10:45:00 IST 2025

1.5 FILTERS

1. head

SYNTAX:

\$ head filename

EXAMPLE:

\$ head college

(Shows top 10 lines)
\$ head -5 college
(Shows top 5 lines)
2. tail
SYNTAX:
\$ tail filename
EXAMPLE:
\$ tail college
(Shows bottom 10 lines)
\$ tail -5 college
(Shows bottom 5 lines)
3. more
Used for paging large outputs. SYNTAX:
\$ Is -I more
\$15 T More
2 13 1 More
4. grep
4. grep Search for patterns.
4. grep Search for patterns. SYNTAX:
4. grep Search for patterns. SYNTAX: \$ grep "pattern" filename
4. grep Search for patterns. SYNTAX: \$ grep "pattern" filename EXAMPLE:
4. grep Search for patterns. SYNTAX: \$ grep "pattern" filename EXAMPLE: \$ cat > student
4. grep Search for patterns. SYNTAX: \$ grep "pattern" filename EXAMPLE: \$ cat > student Arun cse
4. grep Search for patterns. SYNTAX: \$ grep "pattern" filename EXAMPLE: \$ cat > student Arun cse Ram ece
4. grep Search for patterns. SYNTAX: \$ grep "pattern" filename EXAMPLE: \$ cat > student Arun cse Ram ece Kani cse
4. grep Search for patterns. SYNTAX: \$ grep "pattern" filename EXAMPLE: \$ cat > student Arun cse Ram ece Kani cse
4. grep Search for patterns. SYNTAX: \$ grep "pattern" filename EXAMPLE: \$ cat > student Arun cse Ram ece Kani cse ^D

5. sort			
Sorts lines. SYNTAX:			
\$ sort filename			
EXAMPLES:			
\$ sort college #	Sort alphabetically		
\$ sort -r college #	Reverse order		
\$ sort -n numbers.txt # Numeric sort			
\$ sort -u college #	# Remove duplicates		
6. nl			
Adds line numbers. SYNTAX :			
\$ nl filename			
EXAMPLE:			
\$ nl college			
1 Arun			
2 Arsath			
7. cut			
Extracts specific cha	racter positions.		
\$ cut -c1-4 filename			
EXAMPLE:			
\$ cut -c1-3 college			
Output:			
Aru			
Kav			

1.5 OTHER ESSENTIAL COMMANDS

1. free

Description: Displays the amount of free and used physical and swap memory in the system.

• **Synopsis**: free [options]

• Example:

Input:

[root@localhost~]# free -t

Output:

total used free shared buff/cache available

Mem: 4044380 605464 2045080 148820 1393836 3226708

Swap: 2621436 0 2621436

Total: 6665816 605464 4666516

2. top

Description: Provides a dynamic real-time view of processes in the system.

• **Synopsis**: top [options]

• Example:

Input:

[root@localhost~]# top

Output:

top - 08:07:28 up 24 min, 2 users, load average: 0.01, 0.06, 0.23

Tasks: 211 total, 1 running, 210 sleeping, 0 stopped, 0 zombie

%Cpu(s): 0.8 us, 0.3 sy, 0.0 ni, 98.9 id, 0.0 wa, 0.0 hi, 0.0 si, 0.0 st

KiB Mem: 4044380 total, 2052960 free, 600452 used, 1390968 buff/cache

KiB Swap: 2621436 total, 2621436 free, 0 used. 3234820 avail Mem

PID USER PR NI VIRT RES SHR S %CPU %MEM TIME+ COMMAND

1105 root 20 0 175008 75700 51264 S 1.7 1.9 0:20.46 Xorg

2529 root 20 0 80444 32640 24796 S 1.0 0.8 0:02.47 gnome-term

3. ps

Description: Reports a snapshot of current processes.

• **Synopsis**: ps [options]

• Example:

Input:

[root@localhost~]# ps -e

Output:

PID TTY TIME CMD

- 1? 00:00:03 systemd
- 2? 00:00:00 kthreadd
- 3? 00:00:00 ksoftirqd/0

4. vmstat

Description: Reports virtual memory statistics.

• Synopsis: vmstat [options]

• Example:

Input:

[root@localhost~]# vmstat

Output:

```
r b swpd free buff cache si so bi bo in cs us sy id wa st

0 0 0 1879368 1604 1487116 0 0 64 7 72 140 1 0 97 1 0
```

5. df

Description: Displays the amount of disk space available on the file system.

• **Synopsis**: df [options]

• Example:

Input:

[root@localhost~]# df

Output:

Filesystem 1K-blocks Used Available Use% Mounted on

devtmpfs 2010800 0 2010800 0% /dev

tmpfs 2022188 148 2022040 1% /dev/shm

tmpfs 2022188 1404 2020784 1% /run

/dev/sda6 487652 168276 289680 37% /boot

6. ping

Description: Verifies whether a device can communicate with another over a network.

• **Synopsis**: ping [options] destination

• Example:

Input:

[root@localhost~]# ping 172.16.4.1

Output:

PING 172.16.4.1 (172.16.4.1) 56(84) bytes of data.

64 bytes from 172.16.4.1: icmp_seq=1 ttl=64 time=0.328 ms

64 bytes from 172.16.4.1: icmp_seq=2 ttl=64 time=0.228 ms

64 bytes from 172.16.4.1: icmp_seq=3 ttl=64 time=0.264 ms

64 bytes from 172.16.4.1: icmp_seq=4 ttl=64 time=0.312 ms

^C

--- 172.16.4.1 ping statistics ---

4 packets transmitted, 4 received, 0% packet loss, time 3000ms

rtt min/avg/max/mdev = 0.228/0.283/0.328/0.039 ms

7. ifconfig

Description: Used to configure and display network interface parameters.

• Synopsis: ifconfig [options]

• Example:

Input:

[root@localhost~]# ifconfig

Output:

enp2s0: flags=4163<UP,BROADCAST,RUNNING,MULTICAST> mtu 1500

inet 172.16.6.102 netmask 255.255.252.0 broadcast 172.16.7.255

inet6 fe80::4a0f:cfff:fe6d:6057 prefixlen 64 scopeid 0x20<link>

ether 48:0f:cf:6d:60:57 txqueuelen 1000 (Ethernet)

RX packets 23216 bytes 2483338 (2.3 MiB)

RX errors 0 dropped 5 overruns 0 frame 0

TX packets 1077 bytes 107740 (105.2 KiB)

TX errors 0 dropped 0 overruns 0 carrier 0 collisions 0

8. traceroute

Description: Tracks the route that a packet takes to reach the destination.

• Synopsis: traceroute [options] destination

• Example:

Input:

[root@localhost ~]# traceroute www.rajalakshmi.org

Output:

traceroute to www.rajalakshmi.org (220.227.30.51), 30 hops max, 60 byte packets

1 gateway (172.16.4.1) 0.299 ms 0.297 ms 0.327 ms

2 220.225.219.38 (220.225.219.38) 6.185 ms 6.203 ms 6.189 ms
